Functions of a Radiology Information System

1. Effectively manage patient data.

2. Access patient information anytime, anywhere from any device.
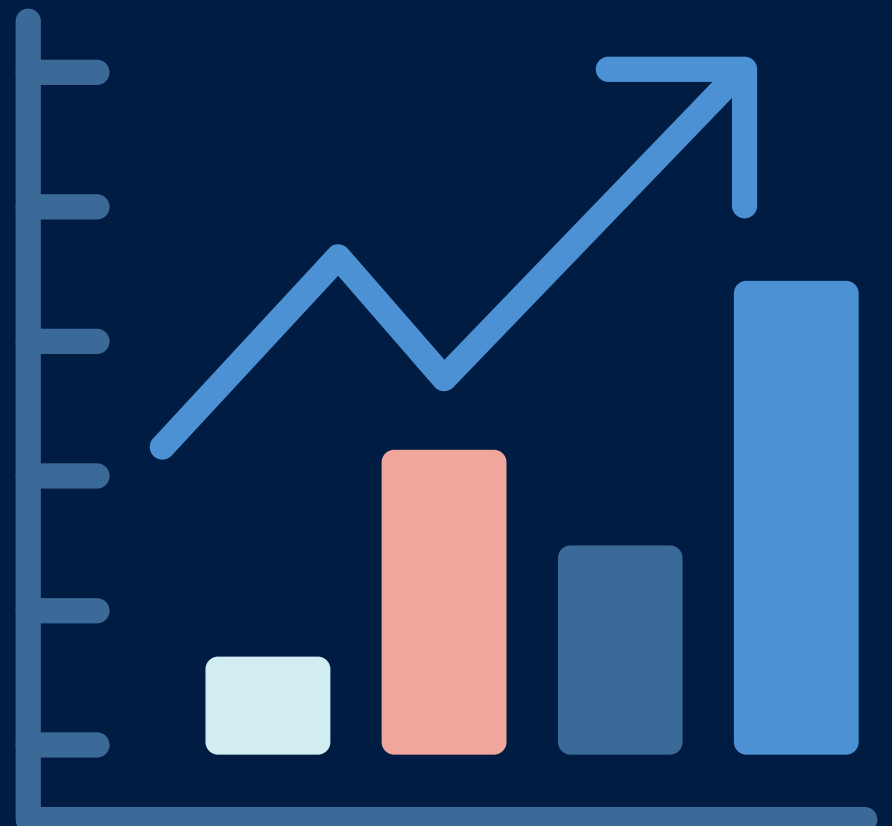

3. Seamlessly schedule patient appointments.

4. Store patient data digitally for an extended time period.

5. Save data as per government regulations.

6. Use Artificial Intelligence based tools for analysis and reporting.

7. • Advanced technology for image tracking.

• High resolution images for accurate diagnosis.

8. Better financial control using billing and analytics.
